

Press Release 27/2019

Neustadt-Fernthal, May 2019

Successful BOY machines at the Chinaplas 2019

In Guangzhou / China BOY met perfectly the trend with the presentation of a fully automated production line including packaging machine. The subject of automation was this year's focus at this major event in the plastics industry, which attracted more than 163,000 visitors.

At the Chinaplas, a fair that was primarily visited by experts, the BOY 35 E went down well with the automated production of delicatessen trays and integrated packaging. The compact footprint of 4.5 m² of the injection moulding machine and the automation cell with integrated BOY-Handling LR 5 impressed the visitors.

With the processing of two-component liquid silicone (LSR) on a BOY 22 A, the German machine manufacturer, located in Neustadt-Fernthal, complemented its trade fair presentation. On a six-fold mould of the company EMDE MouldTec GmbH Silicone nipples were manufactured.

Wolfgang Schmidt, BOY Export Manager, was highly satisfied with the visitor frequency during the four days of the fair. *"We had a variety of promising conversations. Our representative for South China, the company Trillion, has had*

Spritzgiessautomaten

a good reputation for many years. On the occasion of the Chinaplas we honoured Trillion as the most successful of our BOY representatives for Sales and Service.

The steadily growing Chinese plastics market offers many opportunities for BOY. Spritzgiessautomaten We will give the answers with our injection moulding machines and our technology advantages. Our quality standard "Made in Germany" is also very popular in China."
