## Press Release 07/2026

Neustadt-Fernthal, April 2026

### Automated injection moulding solution from BOY at Elmia Polymer in Sweden

Together with its Swedish distribution partner AWI Maskin AB, Dr. Boy GmbH & Co. KG will be presenting a high-performance, compact automation solution for plastics processing at this year's Elmia Polymer 2026. Elmia Polymer will take place from 19 to 22 May 2026 in Jönköping, Sweden, and is regarded as the most important industry platform for the plastics and rubber industry in Scandinavia.

The centrepiece of the exhibition stand is a BOY 35 E fitted with an igus handling system, which is mounted under the machine cover to save space. The machine will be producing food-preserving clips live. The two injection-moulded individual parts are then assembled into finished food-preserving clips by the handling system. This is a practical example of efficient, automated production that also requires minimal floor space.

Malin Andersen, Managing Director of AWI Maskin AB, emphasises the importance of the trade fair and the collaboration with BOY: "Elmia Polymer is the most important trade fair for the plastics and polymers industry in Scandinavia. Together with BOY, we are presenting an extremely attractive, automated cell with a small footprint. We are confident that this solution will persuade even brand-loyal companies to consider BOY as a reliable and forward-looking alternative. German quality – Made in Germany!

Visit us at booth C00:08."

With this solution, BOY once again demonstrates its expertise in energy-efficient, space-saving injection moulding machines and bespoke automation concepts for a wide range of applications.

## Company profile

**Dr. BOY GmbH & Co.KG** is a leading global manufacturer of injection moulding machines with clamping forces up to 1,250 kN. These highly compact, durable machines operate with precision, are energy-efficient and therefore extremely economical. With its innovative concepts and solutions, BOY continues to prove itself as a trendsetter. Automation, digitalisation, sustainability and CO<sub>2</sub> reduction are particular areas of focus. Since the company was founded in 1968, over 55,000 injection moulding machines have been delivered to customers on every continent. The owner-managed company is consistently committed to engineering excellence and quality workmanship 'Made in Germany'. For more information visit [www.dr-boy.de](http://www.dr-boy.de)
